

PRIORITY BUILD & STOCK FLOW

Ibrahim went through BCH OPS on 15 September. He wants a menu that follows the work. An outward that won't go out when the stock is not in the store. A doer and an approver on every stock movement. Stock tracked as assembled or unassembled. A build line simple enough for the floor. Complaints, pricing and expenses in the app as data.

Date	15 Sep 2026
App	BCH OPS
URL	bike-inventory-delta.vercel.app
Recording	22:32 IST · 5 m 33 s
Plus	2 dictations · 3 screenshots

Where this applies. BCH OPS, as shown in Ibrahim's three screenshots on 15 Sep (/assembly on desktop, the Place-Build-On-Hold sheet on mobile, /expenses on desktop). "Today" in this brief means what those screenshots show. The bike-inventory repo on GitHub still carries the July menu, so this brief names screens, not files. Chethan knows where they live.

WHY

WHAT IBRAHIM IS AFTER

“What I'm trying to do is reduce the number of failures, reduce the number of stress, reduce the number of mishaps, and reduce the number of uncertainties so that everything can work in a process.”

Fewer failures An outward cannot go out from a store that does not hold the stock.	Fewer mishaps Every stock movement has a doer and an approver.
Less stress The mech sees what to build first, in two taps or fewer.	Better decisions Complaints, prices and spend in the app as data.

THE MENU, REORGANISED

Operations becomes two things only: **Build line assembly** on top, then **Stock management**, a dropdown with four steps in order. Everything else moves to where it belongs.

OPERATIONS

▲ Build line assembly

sits at the top · keeps its timer · shows every unassembled unit

INSIDE BUILD LINE

· Barcode & labels

STOCK MANAGEMENT · DROPDOWN

1 Inbound

2 Outbound

delivery & dispatch

3 Stock transfer

4 Stock audit

ACCOUNTS

· POS & settlement

SETTINGS

STORE MANAGEMENT

· Warehouse bins

MODULE	WHERE IT IS TODAY	MOVES TO	SAID WHERE
Build-Line Assembly	Operations, 5th item	Operations, at the top	dictation 1
Inbound · Outbound · Stock transfer · Stock audit	Inside Stock Management ›	Stock management, in that order, nothing else	dictation 1
Barcode & Labels	Operations	Inside Build line assembly	dictation 1
POS & Settlement	Operations	Accounts	dictation 1

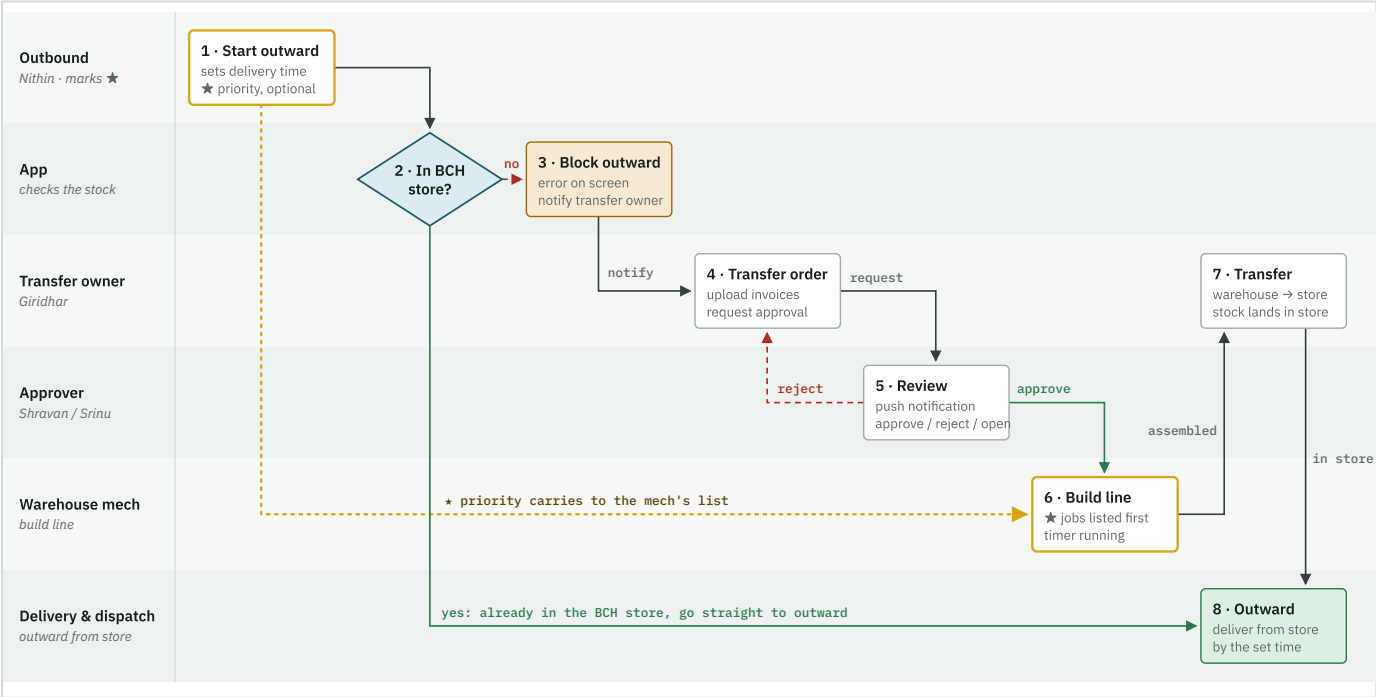

MODULE	WHERE IT IS TODAY	MOVES TO	SAID WHERE
Customer Complaints	Operations	Sales	dictation 1
Customers	Accounts	Sales	dictation 1
Warehouse bins	not visible in screenshots	Settings > Store management	dictation 1
Categories · Brands	not visible in screenshots	Clickable chips inside Stock & inventory	recording 2:46
Second-Hand Cycles	Operations	Not said	question 3
Stock & inventory (item list)	Mobile bottom bar	Holds assembled stock (see section 3)	dictation 2

There is no **Sales** group in today's sidebar. The screenshots show Overview, Operations, Purchase, Accounts, Insights, Admin and Service, so it needs creating.

2 · THE WORKFLOW

OUTWARD WHEN THE CYCLE IS IN THE WAREHOUSE

The place of supply is the BCH store. If the item being sent out is sitting in the warehouse, the outward must stop and pull the stock into the store first. On the way, that pull also starts a build line job. This is the second way the build line gets activated.

- 1
- Outbound person starts the outward**
 Records the delivery date and time. If it's urgent, marks it ★ priority.
“give an option to the person who is doing the outbound... He will just mark it as priority”

- 2 App checks the place of supply**
The place of supply is the BCH store. The check runs before the outward can be saved.
“for any outward that we are doing, we will need to have stock in the place of supply”
- 3 Not in the store? Block, explain, notify**
An error message on screen, and at the same moment a notification to the person who owns the transfer.
“It should hit a trigger, an error message, and also notify a person who must do the transfer”
- 4 Transfer owner raises the transfer order**
Creates it, uploads the invoices, requests approval.
“he'll create a transfer order, upload the necessary invoices, and after that, he will request approval”
- 5 Approver decides from the notification**
A push notification on the mobile app with three choices: approve, reject, or open it for the details.
“he will either approve it, reject it, or, if he wants to deeply understand it, he will understand it”
- 6 Warehouse creates the build line job**
The cycle is assembled in the warehouse before it moves. The job carries the ★ from step 1, and the timer stays.
“In the warehouse, they need to create a build line for that particular assembly”
- 7 Stock is transferred to the store**
Warehouse → BCH store. It moves from *unassembled* to *assembled* stock (section 3), and the outward's check now passes.
“the assembly happens in the warehouse, and then it gets transferred”
- 8 Outward goes out from the store**
Delivered by the time recorded in step 1.

3 • STOCK POSITION

ASSEMBLED VS UNASSEMBLED NEW

Stock has to be counted by **condition**, not only by model. Without that, the build line can't know what needs building, and the stock position can't say what is ready to sell.

“Let's say tomorrow we have 100 units of a model: 20 are in the warehouse in assembled condition and 80 are in unassembled condition. We need to know that number.”

MODEL • LOCATION	ASSEMBLED	UNASSEMBLED	TOTAL
Model A • warehouse HIS EXAMPLE	20	80	100
Model A • BCH store	—	—	—

WHERE EACH CONDITION SHOWS

- **Unassembled** → **all of it** in the Build line. Today: Awaiting Assignment · 107 bicycles ready to build · showing 50.
- **Assembled** → Stock management and Stock & inventory.
- **Both** → a separate page showing assembled and unassembled side by side, per model.

BUILD LINE · AWAITING ASSIGNMENT · WHAT IT NEEDS

MOCK

☒ Select all Filter: model · brand · location · bin Sort: delivery time · received date · model

Assign 3 selected

☒	U-000085 · EMBC/VIPER APEX BLU EMOTORAD · BCH TEST WAREHOUSE · Bin L1 (row from the screenshot)	unassembled
☒	U-000086 · EMBC/VIPER APEX BLU EMOTORAD · BCH TEST WAREHOUSE · Bin L1	unassembled
☒	U-000087 · EMBC/VIPER APEX BLU EMOTORAD · BCH TEST WAREHOUSE · Bin L1	unassembled

“Have a multi-select option, sort option, and filter option so that we know which to filter and pull it out for assembly.” Today each row has its own **Assign** button and the page has a search box only.

4 · BUILD LINE ON THE FLOOR

HOLD A BUILD IN ONE TAP NEW

The mechs don't have formal education. Keep it very simple: two big boxes, and a tap confirms by itself. No list of reasons, no separate Confirm button.

“We can't give them five options, only two small boxes they click on and then it should automatically confirm. You can't even have them click and then put “Confirm Hold”.”

TODAY • PLACE BUILD ON HOLD

Missing Pedals / Accessories

Scratched Frame / Defect in Carton

Deraillleur / Gear Tuning Issue

Disc Brake Rub / Rotor Bent

Called to Customer Counter

Waiting for Workshop Tools

Other Reason...

Cancel

Confirm Hold

7 choices, then a confirm: 2 taps minimum. The timer freezes until the build is resumed.

SHOULD BE • ONE TAP, NO CONFIRM

**ISSUE WITH
THE CYCLE**

**ISSUE ON THE
WORKFLOOR**

Tapping either box puts the build on hold and freezes the timer. Nothing else to press.

5 • CONTROL

EVERY PROCESS HAS A DOER AND AN APPROVER

Each of the four stock activities gets one person who does it and one person who approves it. Approval happens on the phone, from a push notification.

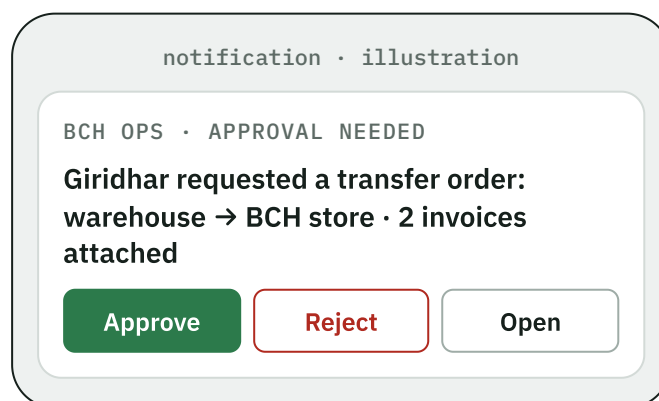

INBOUND does Nithin approves Shravan / Srinu	OUTBOUND does Nithin approves Shravan / Srinu
TRANSFER does Giridhar approves Shravan	AUDIT does Ranjitha? approves Shravan / Srinu

Approver split: Shravan and Srinu divide the approvals by **error rate**. The one with fewer errors earns more of the position. That means the app has to **measure each approver's errors** (see section 8).

“Nithin does inbound and outbound, stays in care by Ranjita, and Shravan approves. Shravan and Srinu will divide what they approve based on their error rate. We can see who is more qualified to get that position.”

Set every name in settings, never in code: the split between Shravan and Srinu will change as the error rates come in.

WHAT THE APPROVER SEES

★ PRIORITY DELIVERY FIRST

A batch that has to be delivered but isn't assembled yet goes to the top of the mech's list with a star. The mech then plans what to build first. The timer stays.

MECH'S ASSEMBLY LIST		EXAMPLE ROWS
★	Order taken 4:00 pm outward · marked priority	today 18:00
★	Delivery batch, not yet assembled outward · marked priority	tomorrow 11:00
	Regular build stock for the floor	in 3 days

HOW THE PRIORITY IS FED

From the delivery schedule. The person doing the outbound marks it priority, and it becomes priority. His example: an order taken **today at 4 pm** that must be delivered **today at 6 pm**.

IF ALL 10 ARE STARRED

“When the 10 jobs are stalled, the system is failing, right? Or maybe we just need to rush all the orders.”

DECIDED · IBRAHIM, 15 SEP

Start with priority delivery as it is: the outbound person marks the star, and starred jobs go first. If everything ends up starred, that's a signal the system is failing, or that every order really does need rushing. Learn from how it's used, then decide the next step. *“Let's start with priority delivery and then understand how we need to move forward.”*

LATER, IF NEEDED · IBRAHIM'S IDEA

Coach the habit: if everyone marks everything priority, tell them the feature then gives no advantage.

LATER, IF NEEDED · CLAUDE'S SUGGESTION

Among starred jobs, the earliest delivery time goes first. The list then stays ordered even when all 10 are starred. It needs a delivery time on every outward, which step 1 already records.

EVERY COMPLAINT IN ONE PLACE NEW

Complaints arrive on several phones, and the telecaller numbers give customers a weak answer. Ibrahim wants every complaint pulled into BCH OPS, so he can see where BCH is falling short.

Floor device 1 • customer contact

gets a lot of complaints

Floor device 2 • customer contact

gets a lot of complaints

Google Maps number

customers without the two numbers call this one

Telecaller numbers (several)

busy with floor sales and other calls, no service information, so they route the call to the main number, the service number

BCH OPS • SALES

CUSTOMER COMPLAINTS

What the customer is facing, what needs doing, and how to handle that customer. Pulled from TeleCRM.

“let us pull them from TeleCRM and put them inside our application so that we understand where we are lacking.”

Read before building. The TeleCRM repo on this Mac (telecaller-crm, last commit 6 May) has **no complaint record**: no file in it mentions a complaint. It stores sales **leads** and a **call log**: phone, direction (incoming / outgoing / missed), answered, wait time, duration, resolved, transferred, notes and SIM slot. So a complaint can't simply be "pulled". Either a call gets tagged as a complaint when it's logged, or the complaint is created in BCH OPS from the call. Also check whether the two floor devices and the Maps number even run TeleCRM (question 5).

8 • REPORTS & EXPENSES

DATA FOR CALCULATED DECISIONS NEW

Price realisation report • admin only

Two products at the same price point can sell very differently: one at a lower price, the other at a higher one. This report shows that gap. Only admins can see it.

“There can be two different products at the same price point, but one is sold at a lower price point and the other is sold at a higher price point. I would want to have this report inside the system, and that report access should be only for admin.”

Start small: reports and analytics come step by step.

Expenses · two graphs

DAILY EXPENDITURE

SHAPE ONLY

HIGHEST SPEND, BY ITEM

SHAPE ONLY

Today /expenses is a list with a total (₹1,306 across 4 test entries). Once Chethan says it's ready, Ibrahim hands it to the person who actually spends on the floor. That person enters real data and says what the module needs.

IBRAHIM ASKED: "WHAT OTHER DATA POINTS WILL HELP ME MAKE BETTER DECISIONS?"

Claude's answer, for Ibrahim to accept or cut. Each group is tied to a decision it would inform.

Complaints

Where are we losing customers?

- Which number or device took it
- Customer phone matched to their bill: model, date bought
- Type: service · part · delivery · billing · warranty
- Days since purchase
- First response time · days to resolve
- Handled by · routed from a telecaller?
- Repeat complainant
- Missed calls on the service number

Price realisation

Which model or person gives away margin?

- Price point vs actual selling price, per sale
- Discount in ₹ and %
- Salesperson · date · payment mode
- Per model: units, average realised price, best vs worst sale

Build line

Is assembly holding up deliveries?

- Unassembled units per model and location
- Minutes per build, per model and per mech (the timer)
- Holds: cycle vs workflow, per week
- ★ jobs delivered on time %
- How many jobs starred per day (the "all 10" signal)
- Age of the oldest unassembled unit

Stock movement

Where does stock sit in the wrong place?

- Outwards blocked because the stock was in the warehouse
- Transfer time: request → in store
- Assembled vs unassembled, per model and location
- Audit variance, per audit

Approvals

Shravan or Srinu?

- Time to approve
- Rejected %
- Errors per approver: approved, then later corrected or reversed
- Volume approved per person

Expenses

Where does daily cash go?

- Daily total and 30-day trend
- By category and by item
- By person who paid
- % of entries with a receipt

9 • FROM THE 22:32 WALKTHROUGH

DASHBOARD, CATEGORIES, BRANDS, ROLES

Main dashboard

A place where decisions get easier: what is stuck, in progress and done, plus the money and stock numbers.

Stuck

In progress

Done

Payables

Receivables

Stock value

Overdue bills

Every page has its own dashboard already. Ibrahim wants to decide which numbers go on the **main** one, so Chethan proposes the shortlist.

32

active categories, read off screen

5,454

products (probable; heard as "5,000 454")

Categories & brands

- There is no parent → subcategory structure today (there is a merge option).
- A parent category holds **no products**, and every product sits in a subcategory. His example: “24” is a parent, with “24 MS” and “24 SS” under it.
- Parent categories should be **inactive**. Today no category is inactive.
- Question: does a category created on the category page **push to Zoho**?
- Brands: make the ones BCH no longer works with inactive. (A staff task, not code.)
- The stock audit needs doing again. (An ops task.)

Roles & permissions: explain them back to Ibrahim

BCH OPS now has a Roles & Permissions page and many controls. For each person, Chethan writes down: role, permissions, operations they perform, and their daily workflow in the app. Ibrahim uses it to guide them.

Nithin

Giridhar

Ranjitha

Shravan

Srinu

10 • FOR THE IMPLEMENTATION PLAN

CHETHAN'S CHECKLIST

0 of 41 ticked

NAVIGATION

7

- ☐ Operations shows **Build line assembly** first, then **Stock management**
- ☐ Stock management holds exactly Inbound, Outbound, Stock transfer, Stock audit, in that order
- ☐ Barcode & labels moved inside Build line assembly
- ☐ Warehouse bins moved to Settings › Store management
- ☐ POS & settlement moved to Accounts
- ☐ New **Sales** group with Customers and Customer complaints
- ☐ Categories and Brands appear as chips inside Stock & inventory

STOCK BY CONDITION

4

- ☐ Every unit carries a condition: assembled or unassembled
- ☐ The build line lists **all** unassembled units, with no 50-row cut-off hiding the rest
- ☐ Assembled units show in Stock management and Stock & inventory
- ☐ A page shows assembled vs unassembled per model and location (e.g. 20 + 80 = 100)

BUILD LINE ON THE FLOOR

5

- ☐ Multi-select units on Awaiting assignment and assign them in one action
- ☐ Filter (model, brand, location, bin) and sort (delivery time, received date, model)
- ☐ Hold = two big boxes, “Issue with the cycle” and “Issue on the workflow”
- ☐ One tap holds the build and freezes the timer, with no Confirm Hold step
- ☐ The build line timer stays

OUTWARD GUARD

4

- ☐ An outward checks stock at the place of supply (BCH store) before it can be saved
- ☐ Stock only in the warehouse → the outward is blocked, and the error says where the stock is
- ☐ The same event notifies the transfer owner
- ☐ The outward records a delivery date and time

TRANSFER & APPROVAL

5

- ☐ Transfer order: create → attach invoices → request approval
- ☐ The approver gets a mobile push with Approve / Reject / Open
- ☐ Reject sends it back to the person who raised it
- ☐ Doer and approver set in settings per activity (Nithin: inbound and outbound · Giridhar: transfer · Shravan / Srinu: approve)
- ☐ Approver error rate recorded, so approvals can be split between Shravan and Srinu **needs question 2**

PRIORITY DELIVERY

3

- ☐ An outward that needs a warehouse item creates a build line job
- ☐ The outbound person can mark it ★ priority
- ☐ The mech's list shows ★ jobs first, with the delivery time on each card

COMPLAINTS

3

- ☐ A complaint record in BCH OPS: source number, customer, product, issue, owner, status
- ☐ Complaints brought in from TeleCRM calls. Decide how a call becomes a complaint first **needs question 5**
- ☐ Covers both floor devices, the Google Maps number and calls routed from telecallers

REPORTS & EXPENSES

4

- ☐ Price realisation report: same price point, sold lower vs higher, per model
- ☐ That report is visible to admins only
- ☐ Expenses: daily expenditure graph
- ☐ Expenses: highest expenditure by item graph, then tell Ibrahim it's ready to test

DASHBOARD & DATA

5

- ☐ Main dashboard shows Stuck / In progress / Done
- ☐ Main dashboard shows payables, receivables, stock value and overdue bills
- ☐ Shortlist for Ibrahim: which numbers go on the main dashboard
- ☐ Categories: parent → sub; a parent holds no products and is inactive
- ☐ Answer: does a category created in the app push to Zoho?

ROLES WRITE-UP

1

- ☐ One page per person (Nithin, Giridhar, Ranjitha, Shravan, Srinu) covering role, permissions, operations and daily workflow

STILL OPEN

NEEDS A CALL

1 **IBRAHIM**What does Ranjitha do?
Your note says “stays in care by Ranjita”. Does she handle stock audit, or something else?
The table shows her on Audit with a question mark.

2 **IBRAHIM**What counts as an approver's “error”?
Approving something later found wrong (wrong quantity, wrong invoice, reversed)? Without a definition, the Shravan vs Srinu split can't be measured.

3 **IBRAHIM**Where does Second-Hand Cycles go?
It's in Operations today, and Operations is now only Build line and Stock management.

- 4** IBRAHIM **Does assembly wait for the transfer approval?**
The diagram assumes the mech starts after Shravan approves.
- 5** IBRAHIM + CHETHAN **Which TeleCRM, and which phones run it?**
Our own TeleCRM app (sales leads and a call log, no complaints), or a different tool? And do the two floor devices and the Google Maps number log calls into it? Is the Maps number the same as the main service number?
- 6** IBRAHIM **“like today, what money recommended”**
This phrase came through garbled before the price-report line. Was it a name, a report or a figure?
- 7** IBRAHIM **Place of supply once franchise stores open**
Always the BCH store, or the store that took the order?
- 8** CHETHAN **Two things on today's build line**
What does the “50% · Box build” tag mean? Does Awaiting assignment load past 50 rows, or are the other 57 of the 107 hidden?

SOURCES

TRANSCRIPTS

Part 1 · Recording, 22:32 IST, 5 m 33 s

WHISPER MEDIUM · WORDS AS TRANSCRIBED

So Chetan pro we need to work on the UI UX of the application. We need to make the dashboard more reasonable and more technical and more as what should be a place where decision-making becomes more easier, right? It should help us understand what is stuck. What is in progress and what is done so that it gives us better clarity and also the payable the receivable the stock value overdubils. These are also very important key Metrix's. I mean every page will have a dashboard rate for the stock also there is a dashboard for categories also there is a dashboard rate basically 32 active categories 5,000 454 product fields. So we need to be able to decide which numbers to show on the main dashboard which are the most relevant numbers of the business that should be on the main dashboard and I wanted to understand whether creating a new category from the category page will well, we will will be able to push it to Zoho.

And inside category we don't have a way of having a parent category and a subcategory. I think we have a merge option though. So yeah, so these are the different categories. I can what to you.

So here I could see there is 24 and there is 24 MS and 24 SS right but out of those 24. There shouldn't be any product inside that because it's a parent category, right? It's a parent category. So there shouldn't be any product inside 24 all the product should be inside the subparent category and currently there are no inactive categories. So the parent categories must only I mean parent categories must be inactive for our system, right?

And then while clicking on the stock management the page that is opening up when it doesn't make sense, right? So it should just open up a drop-down view while I click on the stock management. It should open up a drop-down view which is having all these different details right and categories also can be a part of stock and inventory. Maybe you can have a category section over there and while clicking on that category button it opens up a category page so that you know, it reduces the additional modules in our overview, right? Inside operations there is a categories. There is stock and inventory. There is stock audit inbound tracking delivery and dispatch talk transfer brands warehouse bins the thing brands and the categories can be inside stock and inventory like a small chips inside them where you can click on them and it explores right? It opens up now coming to the.

Now coming to the inbound tracking stock audit.

So there's a task to within to reduce the brands, right to sort out which brands are currently working with and inactive more of the brands here so that we can have less of the data visible here, right? And categories, I think are relevant enough but brands we need to work on that then inside stock audit. We'll have to do a stock audit again and we'll have to figure it out also

what I want from Chetan is let's say if I describe a role like within Giri the Ranjitha Shravan Srinu can you tell me what roles and permissions do they get and what operations they perform inside the application and what is the workflow because now that you have developed this application, there are too many permissions controls and stuff inside this. So if you can tell me what control what I what is their ideal workflow as per the application or what are they going to do on the application in a daily basis, then it becomes more easier for me to understand. And guide them to get this done.

Probable mishearings, unconfirmed: "Chetan pro" = Chethan bro · "overdubils" = overdue bills · "5,000 454 product fields" = 5,454 products · "within" = Nithin · "talk transfer" = stock transfer. Silent stretches while clicking through screens: 1:10–1:15, 1:40–1:49, 3:27–3:46, 4:01–4:12, 4:35–4:43.

Part 2 · Typed dictation 1

VERBATIM

Also, inside the operations, I think it should come in a flow, right?

- Inside stock management, it should be: 1. Inbound 2. Outbound 3. Stock transfer 4. Stock audit. That's it.
- Warehouse bin is not a part of stock management. It is a part of store management, which comes inside settings, so that is a part of it.
- Barcode and label is also not part of operations. It is a part of build line process.
- POS and settlement is also not a part of operations. It is a part of accounts.
- Build line assembly is a part of operations. Again, build line assembly should sit on the top.
- Customer complaint is also not part of operations. It is a part of sales. Customers and customer complaints are a part of sales, so they will sit inside that.

Bro, currently, I went through the build line process, and now there is also another way by which the build-in process is pulled out. First, don't show the timer there, or maybe you can show the

timer. It's okay. I think let there be a timer, and also, for now, let there be a timer inside.

What I was telling you was that there is another way a build-in process actually gets activated: by outward, right? This morning, also check that for any outward that we are doing, we will need to have stock in the place of supply. The place of supply is the store, right? From the BCH store, if that stock is in the warehouse, before doing the outward, that stock needs to be inside the BCH store, right? It should hit a trigger, an error message, and also notify a person who must do the transfer, right?

What I'm going to do is, for every activity (let's say stock transfer, outbound, inbound, and stock audits), I'm going to have one person assigned. I'm going to have one person to oversee all these activities so that it becomes easier for me to make sure there is an operating person who is doing the operations. There is a person who is overseeing and approving those operations, right? For every process, we have approval.

Once we have it on the mobile app, they will simply get a notification from where they will review it. They'll understand it, they will know it, and they'll approve it, right? If there is a transfer order assigned for Giridhar, if Giridhar has to create a transfer order, he'll create a transfer order, upload the necessary invoices, and after that, he will request approval. Shravan is the person who'll give him the approval. How Shravan will get a notification is that he'll get a push notification from where he will either approve it, reject it, or, if he wants to deeply understand it, he will understand it, right?

As I said, related to the outbound tracking, the outbound rate, the deliveries, and dispatch: let's say the item is not available in the store, so there will be a transfer order created if it is in the warehouse. Once they create a transfer order, the assembly happens in the warehouse, and then it gets transferred, right? In the warehouse, they need to create a build line for that particular assembly. While moving it out, they will create a priority assembly.

What I'm asking is: how do we create a priority assembly for the item that needs to get assembled? Let's say we have a batch that we need to deliver, but it's not assembled. The mech should know that these are the priority batches that they need to get assembled so that they can get it delivered, right? The mech should get a priority star mark in his assembly list, by which he can plan which one he gets to assemble first and which one he gets to assemble later, right? This will give him more clarity.

How does this priority list get fed? It depends on the delivery schedule, where we are delivering, and if it needs to be prioritized, maybe we can give an option to the person who is doing the outbound, right? He will just mark it as priority, and then it will become priority.

Here is another little tricky case: let's say they mark all 10 as priority. How do we decide? After that, I think there is no other option, right? Let's try this: if everyone has a habit of marking everything as priority, then we will tell them that there is no advantage of this feature. That is what I've thought, or else what we can do is, based on the delivery timelines, we can set the priority, right? Let's say there is a delivery which needs to happen today at 6 pm, and today we took an order at 4 pm. This needs to be priority, so they will mark it at 6 pm that they'll deliver it at 6 pm.

What I'm trying to do is reduce the number of failures, reduce the number of stress, reduce the number of mishaps, and reduce the number of uncertainties so that everything can work in a

process and everything can happen in a process. That is the goal of the owner, and that will be my goal. That is the reason I'm telling you that this priority delivery, priority build line, and priority delivery are very important features for us.

Part 3 · Typed dictation 2, with 3 screenshots

VERBATIM

Bro, one more thing I understood was that we know we need to track the stock based on its condition, whether it is assembled or unassembled. Let's say tomorrow we have 100 units of a model: 20 are in the warehouse in assembled condition and 80 are in unassembled condition. We need to know that number.

orelse how will the buildline know which are assembled and which are not assembled? I mean, how will the stock position show which are assembled and not assembled?

Issue with the cycle. Issue on the workflow

These guys don't have a formal education bro. We have to keep it very simple. We can't give them five options, only two small boxes they click on and then it should automatically confirm. You can't even have them click and then put "Confirm Hold".

Have a multi-select option, sort option, and filter option so that we know which to filter and pull it out for assembly. All the unassembled bicycles must show here in the build line, and all the assembled ones must show inside the stock management and stock and inventory. There will be another page which shows the unassembled and assembled products.

Add these also inside the document and give it to me in the PDF.

Nithin does inbound and outbound, stays in care by Ranjita, and Shravan approves. Shravan and Srinu will divide what they approve based on their error rate. We can see who is more qualified to get that position. When the 10 jobs are stalled, the system is failing, right? Or maybe we just need to rush all the orders. Let's start with that. Let's start with priority delivery and then understand how we need to move forward.

For customer complaints, I'm thinking there are two devices on the floor, and both get a lot of complaints. Those are the two devices we use to track customer complaints, understand what we need to do, how we need to handle the customer, and what issues customers are facing. These are the two customer contact devices, and there is one more device that has a number listed on Google Maps. If customers don't have those two numbers, they will go back to that one number and give us a call. There are several other numbers handled by telecallers, and customers do call those numbers as well. Usually, they don't get a solid response because those numbers are with telecallers, and telecallers are usually busy with the floor sales and all the other calls they are getting. They usually don't have the information on service and other XYZ-related parts, so they will directly route the calls to the main number, which is the service number.

Now, for all the customer complaints we are getting, let us pull them from TeleCRM and put them inside our application so that we understand where we are lacking. I need the data inside BCH Ops. I need all the data points so that I can make very calculative decisions. I want to understand from you what other data points will help me make better decisions.

There can be, like today, what money recommended. There can be two different products at the same price point, but one is sold at a lower price point and the other is sold at a higher price point. I would want to have this report inside the system, and that report access should be only for admin. Slowly and steadily, we'll start with this. We'll start with the reports and analytics as well, but this is the thought process.

Let the expense module have a graph that shows us our daily expenditures, and also it should have another graph that shows the highest expenditure for the highest item. Once you tell me to start testing the expenditures, I'll give this to the person who actually spends on the floor so that he can start putting in the data. He tells us the inputs of what changes we need to bring to this particular module.

Screenshots: `bike-inventory-delta.vercel.app/assembly` (desktop: Awaiting Assignment 107 · Assembly Tasks 1 · My Build Queue; 107 bicycles ready to build · showing 50) · the mobile Place Build On Hold sheet (7 reasons + Cancel / Confirm Hold) · `/expenses` (desktop: Total shown ₹1,306, 4 entries).

Prepared 15 Sep 2026 from the recording (transcribed on-device with Whisper, since Gemini was refusing with 503s), two typed dictations and three screenshots of BCH OPS. Quotes are verbatim. Anything marked “Claude's suggestion”, “mock”, “illustration” or “shape only” is Claude's, not Ibrahim's, and not live data. Checklist ticks are saved in this browser only.
